Capstone Check-in #1

Lightning Talks Edition

By: Corina Lentz

Idea #1

A recommender that can take in a favorite artist (painting?) and recommend other artists you may like.

Concerns: Is there enough art data out there to do this? And how to measure success?

Alternative: Music recommender?

Idea #2

Build a model to predict weather of a specific area.

Concerns: Not very original, difficult to create something that can be generalized to any area, potential issues with large number of features/overcomplexity needed for accurate predictions.
